

Who is Ron Aaron?

Ron is a professional programmer and entrepreneur, whose career spans almost three decades, with experience including a wide variety of programming languages and development environments.

Among his former employers are Microsoft and Motorola, Traveling Software and Tradigo. Though he worked as an employee for a number of firms large and small, he was also one of the founders and consultants of Moss Bay Engineering – a software consulting firm which operated for about eight years, in Seattle.

Technical Skills

Ron has worked primarily in C and C++, but also has extensive experience with x86 assembly-language, PHP, SQL, Forth, perl, bash, T_EX and awk among others. He has worked on applications for Windows, Linux, Android and Mac as well as MS-DOS.

His main areas of specialization are optimization, security and low-level coding. He has, however, worked on everything from high-speed financial trading and client-server web-based security applications to Android utilities, small database programs and hardware device drivers.

Projects

In addition to writing software for clients, Ron also works on other projects. The *zemanim* application for Android and the [Reva Forth](#) programming language are two of his personal projects. He's also helped over the years by adding features and fixing issues with the [VIM programming editor](#).

Contact Information

Ron can be reached directly by email: ron@aaron-tech.com. For confidential communications he prefers you [use his GnuPG key: 91F92EB8](#). He is also available by phone during Israeli work hours, Su-Th 07:30–17:30 at +972 52-652-5543

With a smart-phone QR-code scanner, you can import his contact information directly:
